

# ZOUBA

## HTML5 Public Transport App

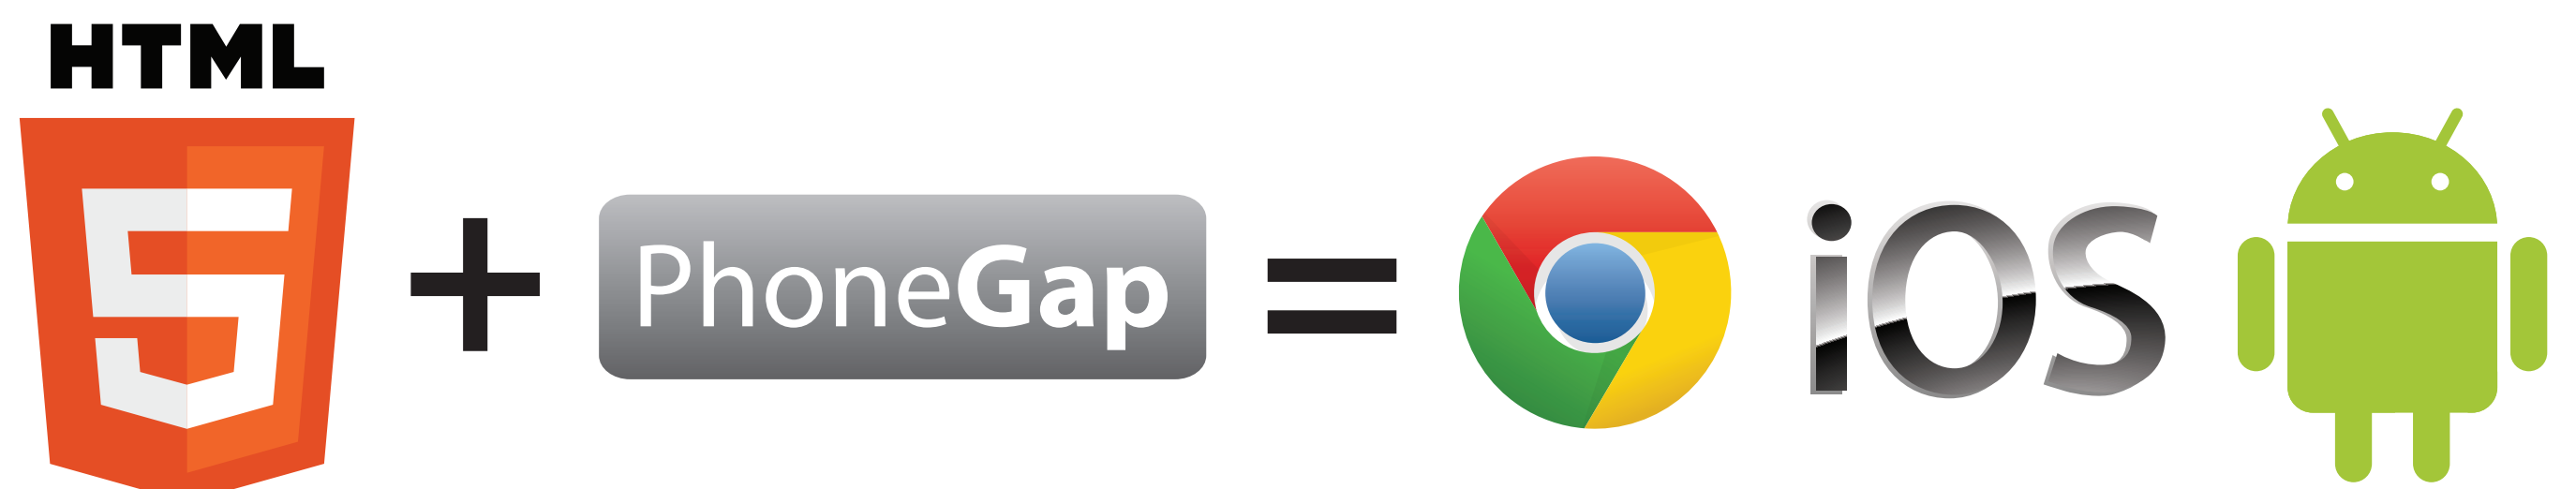

### The App

Zouba is the only app that you need for all your public transport needs! You can save your favorite routes, so you know what time to leave home to get to that bus to work. Best of all thanks to the awesome power of HTML5 the app looks and works the same on your mobile phone, tablet or desktop computer.

### Why HTML5?

We wanted to make sure that the app would look and feel the same on any platform. We used HTML5, which, combined with great support for touch-enabled devices, makes it the obvious choice! In addition, we used the PhoneGap framework to create app versions of Zouba for iOS and Android.
